This tool composes, or combines, sources to create a new file from selected layers. This is really useful if you want to apply a variety of effects - such as color, opacity, blend modes, and more - to multiple layers in an image at once. In addition, the Lasso Tool lets you make selections from the image that you can then merge, adjust, and manipulate, giving you a lot of control over your image. **What It Does:** The Magic Wand tool is the tool of choice for most users who prefer to work with the Liquify tool. It chooses a color, provides you with a variety of ways to the make a selection, and then removes that color from the selected area. **What It Does:** "Layer effects" let you choose from a selection of visual effects, such as the Invert option. The cool thing about layer effects is that you can easily swipe a bunch of them on top of one another. This gives you more control over your image than you'd think possible. **What It Does:** This tool allows you to adjust the contrast, exposure, and color in an image, which makes the image easier to see and understand. The default is already set to the best setting, so it shouldn't be necessary to use the tool at all. However, if you're having trouble determining the way your image falls in on the canvas, this tool helps to get your image in the right proportions. **What It Does:** Just like the Bevel & Emboss tool, the Marquee tool lets you create a bit of border or frame around an image. The typical use for this is to draw a frame around the edge of an image for real-world display. You can give the frame any line, curve, or shape you want, and adjust its dimensions and characteristics. e3d0a04c9c
