Plot summary

Plot summary

Jurassic Park is based on the novel by Michael Crichton, which tells the story of a billionaire philanthropist, John Hammond, who has created a theme park of cloned dinosaurs on a remote island near Costa Rica. He invites a group of experts, including paleontologist Alan Grant, paleobotanist Ellie Sattler, and mathematician Ian Malcolm, to inspect and endorse the park before its opening. He also brings along his two grandchildren, Tim and Lex, who are eager to see the dinosaurs.

However, things go wrong when a disgruntled employee, Dennis Nedry, sabotages the park's security system and steals some dinosaur embryos for a rival company. This allows the dinosaurs to escape their enclosures and roam freely around the island, posing a threat to the visitors and staff. The group is separated during a tour of the park, and they have to survive various attacks from the dinosaurs, including the fearsome Tyrannosaurus rex and the intelligent Velociraptors. They also have to restore the power and communication systems in order to call for help and escape the island.

Cast and crew

Jurassic Park was directed by Steven Spielberg, one of the most influential and successful filmmakers of all time. He is known for his works in various genres, such as adventure, science fiction, drama, and history.
